

## **SANITARY SEWER MAINTENANCE PROGRAM**

**To:** Village of Spring Lake Residents

**From:** Village of Spring Lake Department of Public Works

**Date:** 9/27/17

Plumbers Environmental Services will be root cutting and pressure cleaning sanitary sewer mains in the Village beginning October 1<sup>st</sup>. To take proper precautions, please leave toilet seats down. Occasionally, the water will be vacuumed from drain traps allowing sewer gases to enter the residence. When or if this occurs, ventilate the area and simply flush the toilet or run water down the sink drain to prevent further release of gases. Remember these problems are potential and may not occur in your residence.

This cleaning is implemented to allow crews to televise sewer lines in your area. Please do not park vehicles on or near any manhole cover in the street as it is important to have access to these during the dates above. The Village of Spring Lake would like to thank you for your time and cooperation.

At this time we would also like to request that you do not flush wipes of any kind down your sewer system. Although they claim to be "flushable", they clog sewer pumps and require work crews to shut down pump stations for maintenance.
